

ABSTRACT OF THE DISCLOSURE
PIPE LINER BAG EVERTING NOZZLE AND PIPE LINING METHOD

A pipe liner bag evertng nozzle is provided for allowing an operator to freely access a manhole during a lining operation. A pipe liner bag evertng nozzle comprises a guide tube fixing end for fixing one end of a guide tube, and a pipe liner bag fixing end for fixing a folded end of an uneverted pipe liner bag passed through the guide tube, wherein the guide tube fixing end has a diameter smaller than a diameter of the pipe liner bag fixing end. Since a guide tube having a smaller diameter than that of a pipe line to be repaired (or the pipe liner bag) can be used, a sufficient gap is formed between the guide tube and the manhole, thereby allowing the operator to freely access the manhole during the lining operation for inspection and confirmation of a lining situation.
